

**INSECTICIDE**

In the State of New York, this product may only be applied to indoor uses.

ACTIVE INGREDIENT:
Imidacloprid, 1-(6-Chloro-3-pyridinylmethyl)-4-nitro-2-indazolidinamine.....21.0%

β -Cyathrin, Orange-fluorophenoxy- β -phenoxophenyl)methyl 3-(2,2-dichlorovinyl)2,2-dimethyl-

cyclopropanecarbonatate.....10.5%

OTHER INGREDIENTS:.....68.5%

TOTAL:.....100.0%

STOP - Read the Label Before Use

KEEP OUT OF REACH OF CHILDREN

FIRST AID	
If on skin:	<ul style="list-style-type: none">• Take off contaminated clothing.• Rinse skin immediately with plenty of water for 15 to 20 minutes.
If in eyes:	<ul style="list-style-type: none">• Hold eyes open and rinse slowly and gently with water for 15 to 20 minutes.• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eyes.
If swallowed:	<ul style="list-style-type: none">• Call a poison control center or doctor immediately for treatment advice.• Have person sip a glass of water if able to swallow.• Do not induce vomiting unless told to do so by a poison control center or doctor.• Do not give anything to an unconscious person.
Note to Physician:	<p>Have the product container or label with you when calling a poison control center or doctor or going for treatment. You may also contact 1-800-334-7577 for emergency medical treatment information.</p>

PRECAUTIONARY STATEMENTS

HAZARDS TO HUMANS AND DOMESTIC ANIMALS

CAUTION

Harmful if absorbed through skin. Harmful if swallowed. Causes moderate eye irritation. Avoid contact with skin, eyes, or clothing. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, or using tobacco. Wear long-sleeved shirt and long pants, socks, shoes, and gloves. Remove contaminated clothing and wash before reuse.

ENVIRONMENTAL HAZARDS

This pesticide is extremely toxic to wildlife, fish, and aquatic invertebrates. Drift and run-off from treated areas may be hazardous to aquatic organisms in neighboring areas. Care should be used when spraying to avoid fish and reptile pets in/around ornamental ponds. This product is highly toxic to bees exposed to direct treatment or residues on blooming crops/plants, or weeds. Do not apply this product or allow it to drift to blooming crops/plants or weeds if bees are foraging the treatment area.

To protect the environment, do not allow pesticide to enter or run off into storm drains, drainage ditches, gutters, or surface waters. Applying this product in calm weather when rain is not predicted for the next 24 hours will help to ensure that wind or rain does not blow or wash pesticide off the treatment area. Rinsing application equipment over the treated area will help avoid run off to water bodies or drainage systems.

PRODUCT FACTS	
• Two modes of action	• Contact activity & systemic action
• Tempid® FX Insecticide	• Low odor • Non-staining
Insecticide	Tempid® FX is a suspension concentrate formulation of two insecticide active ingredients, imidacloprid and β -cyfluthrin. One gallon of this product contains 2 lbs of imidacloprid and 1 lb of β -cyfluthrin.
Controls	• Shake well before using.
Where To Apply	• Indoor / General Household Pests. • Outdoor / Perimeter Pests. • Wood-Hunting Pests. For list of specific insects, see inside.
Dilution Rates	• Apply where a pest have been seen or found, or can find shelter. • On and around buildings and structures. • On established landscape ornaments that are not in bloom around residential and commercial properties.
Mixing Information	• When 0.27 fl oz (8 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.073%) contains 0.05% imidacloprid and 0.025% β -cyfluthrin. • When 0.54 fl oz (16 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.15%) contains 0.10% imidacloprid and 0.05% β -cyfluthrin. • Mix the appropriate amount of Tempid® FX insecticide with water. • Add product when filling spray tank with water, shake or agitate mixture. • Diluted spray mixture can be stored overnight. Agitate before using.

PRODUCT FACTS	
How To Apply	<ul style="list-style-type: none">• General surface (outdoors only) spot treatment, and void injections by mist, foam, or crack and crevice sprays.• Foliar application to established landscape or ornamentals that are not in bloom.
Re-Apply	<ul style="list-style-type: none">• Every 7 to 10 days if needed.• Do not apply more than 32.0 fluid ounces of Tempid FX insecticide per acre, per year. (Equal to maximum annual use of 0.5 pounds of imidacloprid and 0.25 pounds of β-cylindrin per acre, per year).• At the 6 milliliter per gallon use rate, this is a limit of 11.8 dilute gallons per acre, per year for landscape, lawn, and ornamental applications.
Re-Entry	<ul style="list-style-type: none">• Do not contact treated surfaces until dry.• People and pets may re-enter after the treated area is dry.
Questions	For questions or comments, call toll-free 1-800-331-2867 
DIRECTIONS FOR USE It is a violation of Federal law to use this product in a manner inconsistent with its labeling.	

<p>Do not apply Tempid FX insecticide while bees are foraging. Do not apply Tempid FX insecticide to plants that are flowering. Only apply after all flower petals have fallen off.</p> 																																																									
<p>INDOOR PESTS</p>																																																									
<p>FOR RESIDUAL PEST CONTROL IN BUILDINGS, STRUCTURES AND MODES OF TRANSPORT</p>																																																									
<p>Use Tempid FX insecticide as a spot spray or crack and crevice treatment inside buildings and structures. This includes schools, factories, stores, warehouses, hospitals, food processing facilities (non foodted areas), and modes of transport. For a list of common facilities where this product may be used see appendix.</p>

<p>Where To Apply</p> <ul style="list-style-type: none"> • Treat where pests have been seen or found, or can find shelter. • Use only as a spot spray or crack and crevice or void treatments inside buildings and structures. 																																																									

continued

INDOOR PESTS (continued)	
Where To Apply	<ul style="list-style-type: none"> Treat entry points, such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide, such as baseboards, corners, around water pipes, behind or under refrigerators, cabinets, sinks, and stoves. Mist or foam applications can be made behind veneers, pipes, and chimney bases, into culled foundations, into block voids or structural voids, wall voids, under slabs, steps, porches, or to the soil in crawlspaces, and other similar voids. Spot treat (not to exceed 2 square feet) floor or rugs beneath furniture, in closets, and storage areas, but do not apply to entire floor area.
Use Rate	<ul style="list-style-type: none"> 0.075% -- 0.27 fl oz (8 milliliters) per gallon of water. Except for bed bugs, use the higher specified rate for severe infestations, faster knockdown, and longer residual. For bed bugs, do not exceed an application rate of 0.075% - 0.27 fl oz (8 milliliters) of Tempid F1 Insecticide per gal of water.
How To Apply (also see Application For Indoor Pests)	<p>Removal of Litter:</p> <ul style="list-style-type: none"> Remove or lightly cover fish tanks and dislodge arachnids from sites of application until treated surfaces are completely dry. Do not contact treated surfaces until dry. When treating areas over your head, wear eye protection (safety glasses, goggles, or face shield) and dust mask or particulate respirator. <p>Spot Applications:</p> <ul style="list-style-type: none"> Use a low-pressure system (do not exceed 50 psi at nozzle tip) with a fan-type nozzle to apply the dilution uniformly. In the home, cover all food processing surfaces and utensils or thoroughly wash following treatment. Cover exposed food or remove from area being treated.

continued

INDOOR PESTS (continued)	
How To Apply Also	<ul style="list-style-type: none"> • Spray, mist or foam directly into cracks and crevices or voids where pests or their nests are present. Apply the volume to spray, mist, or foam sufficient to cover the area. • Spray: Use a low-pressure system do not exceed 50 psi at nozzle tip with a pinpoint or variable pattern nozzle, or applicator equipment that delivers low volume treatments. • Mist: Use appropriate mist generating equipment. Do not allow mist to drift out of void spaces into commonly occupied areas of the structure. • Foam: Use appropriate foam generating equipment to supply a sufficient volume of foam. • Mix the dilution with manufacturer's specified volume of foaming agent.
When To Apply	<ul style="list-style-type: none"> • When nests are seen or found. • Re-apply every 7 to 10 days if needed.
Application Restrictions	<ul style="list-style-type: none"> • Do not apply in food/feed areas of food and feed handling establishments. • Do not apply broadcast treatments to doors or floor coverings. • Do not apply in hospital and/or nursing home rooms while they are occupied. • Do not apply in classrooms while they are occupied. • Do not apply as a space spray. • Do not allow excessive dripping or run-off to occur from vertical or overhead surfaces. • Do not apply where electrical short circuits can occur, use a fast dry bait in these areas. • Do not apply to furniture or upholstery where prolonged contact with humans will occur. • Do not spray bed linens or other materials which come in direct contact with occupants of the bed. • Do not apply more than 5 gallons of diluted product indoors per individual applicator per day.

APPLICATION FOR INDOOR PESTS	
Crawling insects Cockroaches, Silverfish, Spiders, and other listed pests	<p>Use a coarse, low pressure spray do not exceed 50 psi at nozzle tip). Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pests normally feed or hide such as baseboards, corners, around water pipes, under refrigerators, cabinets, sinks, and stoves, being sure to spray cracks and crevices. Spot treat floor or rugs beneath furniture, in closets, and storage areas, but do not apply to entire floor area.</p> <p>For more difficult to control pests, like certain spiders, direct contact spray is required for effective control.</p>
Bed bugs	<p>Use Rate: 0.075% - 0.27 fl oz (8 milliliters) of Tempid FX insecticide per gal of water; Controls bed bug populations that are resistant to pyrethroid insecticides. Efficacy of this product is not affected by heat treatments, so no application can be made before heat treatments in integrated bed bug elimination programs. Spray bugs and eggs directly whenever possible following site directions above. Bed bug eggs that are directly treated with this product can kill outright, and young nymphs that emerge from eggs are killed by adult residues.</p> <p>For infested mattresses, remove them and wash before reuse. Apply to tufts, seams, folds, and edges until moist. Allow to dry before remaking bed.</p> <p>Apply to bedspreads, box springs, and the interior of bed frames or headboards, including air cracks and joints.</p> <p>When bed bugs are found in upholstered furniture, apply only to the infested tufts, seams, folds, and edges, but do not apply to flat surfaces where prolonged human contact will occur. If bugs heavily infest furniture (inside cushions and/or batting), apply a labeled insecticide dust or consider fumigation.</p> <p>Apply as a crack and crevice treatment to all baseboards, moldings, beneath floor</p>

Continued

APPLICATION FOR INDOOR PESTS <i>(continued)</i>	
Bed bugs	coverings and carpets; closets, shelves, curtains, furniture and picture frames that may provide harborage to bed bugs, inside empty luggage, apply in seams, folds and edges until moist; remove all clothes and other articles from luggage before application and allow treated areas to thoroughly dry before use. Re-apply every 7 to 10 days, as needed, until infestation is eliminated.
Ants	Apply to ant trails on walls, tile, baseboards, around pipes, under cabinets, and other places where ants are active. Treat entry points such as windows, doors, or sites where utilities enter the structure; also see directions for use in outdoor/Perimeter Pests section. Treat nests when possible.
Listed Flying Insects	Apply to surfaces where these pests congregate, collect, or rest.

OUTDOOR/PERIMETER PESTS	
Ants	Glove mites
Blue or Green Bottle flies	Crickets
Boxelder bugs	Earwigs
Brown marmorated stink bugs	Elm leaf beetles
Caneborer ants	House flies
Centipedes	Elm seed bugs
Cockroaches	Fire ants
Cluster flies	Fleas
	Flebotomus
	Flehs flies
	Flies
	Grats
	Ground beetles
	Hornets
	House flies
	Kudzu (giant) vine
	Lady beetles
	Pill bugs
	Scorpions
	Shrike fly
	Silkie fly
	Sow bugs
	Spiders
	Springtails
	Stable flies
	Ticks
	Wasps
	Western conifer seed bugs
	Yellow jackets
	Mosquitoes
	Moths
	Millipedes

- Where To Apply**
- Apply to surfaces on buildings, porches, patios, and other structures around doors and windows, eaves and overhangs, soffits, and other exterior surfaces (including foundation cracks or drilled holes) where these pests enter the structure or where they have been seen or found, or can find shelter.
 - To prevent or to control infections outdoors, treat the outside of the structure, to include walls (to a height of 2 to 3 feet) around doors, windows, and soffits where pests are active or may enter or hide. Treat the soil, turf, or other non-towering ground covering adjacent to the structure (in a band up to 10 feet wide) and wherever pests are seen, have been found or can find shelter.
 - In rat management programs, apply to shrubs or ornamental plant beds that are not blooming, and where rats may find food or forage.
 - In mosquito and occasional invader management programs, apply to trees, shrubs, or ornamental plant beds that are not blooming.
 - In flea and tick management programs, apply along paths, tall grass, and other vegetation that is not blooming.
 - To control listed stinging insects, treat nests and/or mounds wherever they occur.

(continued)

OUTDOOR/PERIMETER PESTS (continued)

Use Rate	<ul style="list-style-type: none"> • 0.075% - 0.271 oz (milliliters) per 1,000 sq ft of surface. • 0.15% - 0.54 fl oz (15 milliliters) per 1,000 sq ft of surface. • Always use the 0.15% rate for ants, hornets, wasps and yellow jackets.
How To Apply (also see Applications for Outdoor / Perimeter Pests)	<p>High volume applications using power sprayers: In power sprayers, adjust the rate of product dilution to apply 3 to 6 milliliters of Fenopid FX insecticide per 1,000 square feet in sufficient water to provide adequate coverage. For example, mixing 4.5 fluid ounces (133 milliliters) of this product in a 50 gallon tank, when applied in a volume of 1.0 gallons per 1,000 square feet will apply 27 fluid ounces of this product per 1,000 square feet. The table below gives examples of end use dilutions for typical power spraying application volumes.</p>

DILUTION RATE CHART

Amount of Product fluid ounces (milliliters)	Application Volume gallons water	Concentration (% AI) in spray solution
0.27 (8)	1	0.075%
	2	0.038%
	3	0.025%
	4	0.019%
	5	0.015%
0.54 (16)	1	0.150%
	2	0.075%
	3	0.050%
	4	0.038%
	5	0.030%

(continued)

OUTDOOR/PERIMETER PESTS (continued)	
How To Apply (also see Applications For Duration/Perimeter Pests)	<p>Apply enough dilution to adequately cover the area without excessive dripping or runoff. Volume can vary depending on the surface type treated. For example, mulch requires more spray than bare soil. Do not contact treated surfaces until dry.</p>
When To Apply	<ul style="list-style-type: none"> • When pests are seen or found. • Re-apply every 7 to 10 days if needed, not to exceed max rate per calendar year. • Do not allow this product to contact plants in bloom. • Do not apply more than 32.0 fluid ounces of Tempid FX Insecticide per acre, per year for landscape, lawn, and ornamental applications. Maximum annual use of 0.5 pounds of imidacloprid and 0.25 pounds of β-cyfluthrin per acre, per year. • At the 8 milliliter per gallon use rate, this is a limit of 1.6 fluid gallons per acre, per acre-per year for landscape, lawn, and ornamental applications.
Application Restrictions	<p>Do not apply more than 32.0 fluid ounces of Tempid FX Insecticide per acre, per year, per acre, per year.</p> <p>Maximum annual use of 0.5 pounds of imidacloprid and 0.25 pounds of β-cyfluthrin per acre, per year.</p> <p>Do not apply directly to impervious horizontal surfaces, such as sidewalks, driveways, and patios except at a spot or crack and crevice treatment. During application, do not allow pesticide to enter or run off storm drains, drainage ditches, gutters, or surface waters. All outdoor applications, if permitted elsewhere on this label, must be limited to spot or crack and crevice treatments only, except for the following permitted uses:</p> <ol style="list-style-type: none"> 1. Applications to soil or vegetation, as listed on this label, around structures; 2. Applications to lawns, and other vegetation, as listed on this label;

(continued)

OUTDOOR/PERIMETER PESTS <i>(continued)</i>	
Application Restrictions	3. Applications to the side of a building, up to a maximum height of 3 feet above grade; 4. Applications to underside of eaves, soffits, doors, or windows permanently protected from rainfall by a covering, overhang, awning, or other structure; 5. Applications around potential pest entry points into buildings, when limited to a surface band not to exceed one inch in width;
	6. Applications made through the use of a coarse, low pressure spray to only those portions of surfaces that are directly above bare soil, lawn, turf, mulch, or other vegetation, as listed on this label, and not over an impervious surface, drainage, or other condition that could result in runoff into storm drains, drainage ditches, gutters, or surface waters, in order to control occasional invaders or aggregating pests.
	7. Do not allow this product to contact plants.
	8. Do not apply this product by any application method, to Linden, basswood, or other Tilia species.
APPLICATION FOR OUTDOOR/PERIMETER PESTS	
Ants	Locate and treat ant nests if possible. Follow trails of foraging workers, check under objects near the structure, and inspect other likely nest sites. If ants are resting in the soil, thoroughly drench or inject the nest and surrounding soil. Treat ant trails around windows and doors along sidewalks, or other areas where seen. Apply a perimeter treatment as described above. Tempid FX Insecticide contains a systemic insecticide (imidacloprid), so foliar application to landscape ornamentals provides local systemic control of aphids, scale insects, and other plant-sucking insects and limits the production of honeydew (an important food source for ant populations). Apply a very light mist of the dilute spray, and do not allow excess run-off. Treat thoroughly for good control.

(continued)

APPLICATION FOR OUTDOOR/PERIMETER PESTS (continued)

Ants	coverage, including the underside of leaves, as these pests often feed or rest there. Aerial Nests: If ant nests are located in tree hollows or non-structural wooden construction (e.g., posts, fences, decks), treat the interior cavity and/or the nest site by injecting a spray mist or sufficient volume of damp.
Hornets, wasps, and yellow jackets	Use Rate: 0.13% - 0.54 fl. oz. (16 milliliters) of Temprid FX insecticide per gal. of water. Make pin stream applications directly to the nests. To help avoid strings near nests in the evening when the insects are inside the nest. Remove and destroy treated nests to prevent emergence of newly hatched insects. If removal is not possible, retreat nests if necessary.
Occasional invaders Boreid bugs, damsel bugs, seed bugs, stink bugs, and other listed pests	Apply directly to insects that have congregated around doors and windows and similar areas where they may enter structures. Apply perimeter treatment as described above to best results. Treat infested trees and shrubs early in the season. A single foliar application of this product will kill stink bugs feeding on protected plants for 4 weeks. Tree spraying may require ornamental license – check with your local regulator.

(continued)

APPLICATION FOR OUTDOOR/PERIMETER PESTS (continued)	
Centipedes, earwigs, millipedes, pill bugs, sow bugs, springtails, etc.	Apply perimeter treatment to reduce the number of insects from entering the structure. Thoroughly treat mulched areas. Correcting moisture problems around the structure will reduce pest pressure.
Fire Ants	<p>Use Rate: 0.15% - 0.54 fl oz (16 milliliters) of Temprid FX Insecticide per gal of water.</p> <p>Thoroughly drench or inject the entire mound. When using injection treatment, you must treat the bottom of the mound. Apply dilution or foam using a downward and upward motion of the injector tool. For complete distribution, inject in several points throughout the mound.</p> <p>Treat new mounds as they appear.</p> <ul style="list-style-type: none"> • Do not use in pastures or areas of food crop production.
Fleas & ticks (including ticks that may transmit Lyme Disease and Rocky Mountain Spotted fever)	<p>For ticks, treat likely harborage areas like along paths, tall grass, and other vegetation. For fleas, concentrate treatments in areas where pets are known to rest, as these areas are larval breeding hot spots.</p> <p>One application will kill adult fleas for 2 to 3 months and aids in control of larval fleas for up to 1 month.</p> <p>Treat the entire area where these pests could be present. Fleas and ticks may be introduced from surrounding areas by host animals.</p>
House flies and Cluster flies	<p>Apply low-volume mist or spray to outside surfaces of buildings, porches, patios, garages, fences, and other areas where house flies rest.</p>

(continued)

APPLICATION FOR OUTDOOR/PERIMETER PESTS (continued)

House flies and Cluster flies	Cluster flies: Treat in late summer or fall, just before cluster flies begin boating for winter shelter. Spray gables, eaves, around windows and doors, window screens, and attics. To help reduce infestations, treat cracks & crevices, attics, and other indoor winter hiding places.
Mosquitoes (including mosquitoes that may transmit Zika, Dengue, Chikungunya, and West Nile virus)	Treat with spray or mist around landscape plants, turf, and ground cover, under decks, around building foundations, and other places where mosquitoes may rest.
Scorpions	Apply as a perimeter treatment to exterior walls and adjacent soil, to known or suspected habitats of scorpions. Apply spot treatments into cracks, crevices, sweep holes, or other access points into hollow block walls or masonry veneer. When possible, remove piles of debris and building materials near the exterior wall that can harbor the pests. You may treat around piles of firewood, but do not treat firewood with this product.

WOOD-INFESTING PESTS

Drywood termites	Beetles, scat'ls	Beetles, con'tl
Beetles	- Bark beetles	- Old house borers
- Ambrosia beetles	- False powderpost	- Wharf borers
- Ambid or deathwatch	- Lyctid or powder post	

(continued)

WOOD-INFESTING PEST (continued)	
Where To Apply	<ul style="list-style-type: none"> • For treatment of wood infested with, or subject to infestation by, wood-infesting pests. • Apply where pests have been seen, found, or can find shelter.
Use Rate	<ul style="list-style-type: none"> • 0.073% - 0.27 fl. oz (8 milliliters) of Tempid FX Insecticide per gal of water
How To Apply also see Application section	<ul style="list-style-type: none"> • Apply spray of foam as described in application section. • Treatment dilutions may also be applied to wood surfaces by paint brush or rollers. • Do not contact treated surfaces until dry.
When To Apply	<ul style="list-style-type: none"> • When pests are seen or found. • Re-apply every 7 to 10 days if needed.
Foam Applications	<ul style="list-style-type: none"> • Mix end-use dilution with manufacturer's specified volume of foaming agent
APPLICATION FOR WOOD-INFESTING PESTS	
Drywood termites & wood-infesting beetles	<p>Galleries and structure voids: Treat by applying sprays, mists, or foams. Locate galleries by using visual signs (frass or pellets, blistered wood, emergence or clean out holes), the presence of live insects, mechanical sounding techniques or listening devices (e.g., stethoscopes, acoustic emission detectors). Perforate the gallery system by drilling holes to receive the injector tip or treatment tool. Distribute a full holes load evenly over the gallery system. Apply as a low pressure spray (do not exceed 50 ps at nozzle tip) or by misting, or where appropriate, by foaming. It is often necessary to treat to the point where liquid is reflected from adjacent holes.</p> <ul style="list-style-type: none"> • Avoid drilling where electrical wiring, plumbing lines, etc. are located. • Do not apply where electrical shock hazards exist. • Drill holes in commonly occupied areas must be sealed after treatment.

(continued)

APPLICATION FOR WOOD-INFESTING PESTS (continued)	
Drywood termites & wood-infesting beetles	<p>Wood surfaces: Treat by spray, mist, or where appropriate, foam applications. For inaccessible surfaces, drill and treat the interior of structural voids. Surfaces treated may include exposed wooden surfaces in crawlspaces, basements, or attics; wooden exterior surfaces such as decks, paneling, or siding; structural voids; channels in damaged wood; spaces between wooden members of structure; and junctions between wood and foundations. Apply by brushing or as a coarse, low pressure spray (do not exceed 50 psi at nozzle tip) to the wood surface; apply sufficient volume to cover the surface to the point of wetness, but avoid applying to the point of runoff. When spraying wood surfaces overhead in living areas, cover surfaces below the treated area with plastic sheeting or similar material. Do not contact treated surfaces until spray deposits have dried.</p>
Carpenter ants	<p>Homes and other structures: Apply around doors and windows and other places where carpenter ants may enter. Spray or foam into cracks and crevices, or spray mist or foam through small drilled holes into voids where ants or nests are present. Use enough spray or foam to cover the area inside trees, utility poles, fencing and decking materials, and similar structural members. Drill to find the infested areas and inject spray, mist, or foam using a treatment tool with a splashback guard.</p> <p>Injecting in soil: Apply as a soil drench and inject the dilution or foam into the soil at intervals of 8 to 12 inches. Use 1 gallon of dilution per sq. ft. treat along the edge of walls, driveways, or other hard surfaces, where ants are tunneling beneath the surface.</p> <p>Treating firewood from carpenter ants: treat soil beneath firewood before stacking at a 1 gallon of dilution per 8 sq. ft.</p> <ul style="list-style-type: none"> • Do not treat firewood with this product. <p>It is recommended to remove or prune away any shrubby bushes, and tree branches touching the structure. Vegetation touching the structure may offer a route of entry for ants into the structure. This may allow ants to inhabit the structure without coming in contact with the treatment.</p>

(continued)

APPLICATION FOR WOOD-INFESTING PESTS (continued)

Carpenter bees	If or on structures: Apply as a spray or mist, or sufficient volume of foam, directly into gallery entrance holes. Leave entrance open to be sure that returning adult bees are killed. Exterior wood surfaces may be treated by general surface application to prevent nest cavity excavation by adult carpenter bees.
STORAGE AND DISPOSAL	
PESTICIDE STORAGE	Do not contaminate water, food, or feed by storage or disposal.
PESTICIDE DISPOSAL	Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
CONTAINER HANDLING	Less than one gallon: Non-refillable container. Do not reuse or refill this container. Offer for recycling if available. Triple rinse container (or equivalent) promptly after emptying. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank and drain for 10 seconds after the flow begins to drip. Fill the container 1/4 full with water and recap. Shake for 10 seconds. Pour rinse into application equipment or a mix tank or store rinsate for later use or disposal. Drain for 10 seconds after the flow begins to drip. Repeat this procedure two more times. If recycling is not available, puncture and dispose of in a sanitary landfill by incineration, or as allowed by state and local authorities, by burning. If burned stay out of smoke. If partly filled, Call your local Solid Waste agency for disposal.

(continued)

STORAGE AND DISPOSAL (continued)	
CONTAINER HANDLING	<p>Instructions: Never place unused product down any indoor or outdoor drain. Non-refillable containers: Do not reuse or refill this container. After emptying product from container, either return container to Bayer CropScience per instructions from Bayer CropScience Customer Service Center (1-800-527-4781) for reuse and either recycle or dispose of the container as follows:</p> <p>Bottom Discharge BC (e.g., Schutz, Caged IBC or Snyder Square Stackable)</p> <p>Pressure rinsing the container before final disposal is the responsibility of the person disposing of the container. To pressure rinse the container before final disposal, empty the remaining contents from the IBC into application equipment or mix tank. Raise the bottom of the IBC by 1.5 inches on the side which is opposite of the bottom discharge valve to promote more complete product removal. Completely remove the top lid of the IBC. Use water pressurized to at least 40 PSI to rinse all interior portions. Continuously pump or train rinsate into application equipment or rinseate collection system while pressure rinsing. Continue pressure rinsing for 2 minutes or until rinsate becomes clear. Replace the lid and close bottom valve.</p> <p>Top Discharge IBC, Drums, Kegs (e.g., Snyder 120 Next Gen, Berat B120, Drums, and kegs)</p> <p>To pressure rinse the container before final disposal is the responsibility of the person disposing of the container. To top rinse the container before final disposal, empty the remaining contents from this container into application equipment or mix tank. Fill the container at least 70 percent full with water. Agitate vigorously or recirculate water with the pump for 2 minutes. Pour or pump rinsate into application equipment or rinseate collection system. Repeat this procedure two more times. Once container is rinsed, offer for recycling if available or puncture and dispose of in a sanitary landfill, or by incineration.</p>
